

SculpSure[®]

A Smarter Way to Sculpt[™]

Smart technology is everywhere, steadily transforming our world into a better place. But body contouring has been stuck in the past. Until now.

SculpSure's non-invasive laser body contouring is a giant leap forward that helps you achieve a natural-looking, slimmer appearance.

It's simple, efficient, effective.

Finally, body contouring is as advanced as the rest of your world. ***It's the smarter choice.***

SculpSure®

Non-invasive body contouring

SculpSure's body contouring technology is able to safely target and destroy fat cells in just 25 minutes per treatment area, helping you achieve a slimmer appearance.

- ✓ FDA cleared to treat abdomen, flanks, back, thighs and under the chin
- ✓ Customizable treatment plans
- ✓ Natural looking results*
- ✓ Over 90% patient satisfaction rate^{1,2}

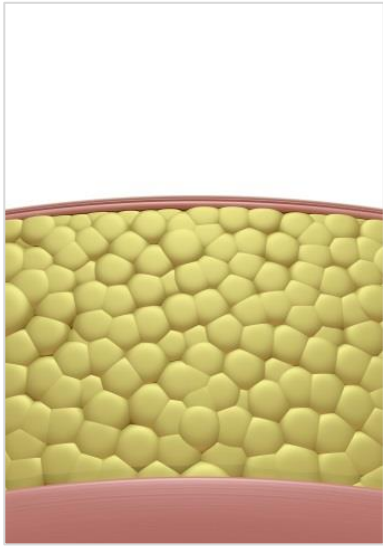

No Surgery. No Downtime. Just Results.

*SculpSure's heat-based technology spreads beyond the edges of the treatment area, facilitating natural-looking results.

2. Average patient discomfort rating of 3.7 on a scale of 1-10; Bass L, Doherty S. Non-Invasive Fat Reduction Of The Abdomen With A 1060nm Diode Laser. Paper presented at: 2015 Annual American Society for Laser Medicine and Surgery Conference; April 22-26; Kissimmee, FL.

How SculpSure Works

TARGET

Targeted laser energy heats fat cells under the skin without affecting the skin's surface.

DESTROYING FAT CELLS

SculpSure raises the temperature of fat cells, damaging their structural integrity.

ELIMINATION

Over the next three months, the damaged fat cells are processed and eliminated by the body's lymphatic system.

RESULTS

Fat cells are permanently removed and will not regenerate. Results can be seen as quickly as six weeks, and optimal results typically seen at 12 weeks.

After your SculpSure Treatment

Since there is no downtime, you can get back to your normal routine right away.

For the best results, we suggest the following:

- Gently massage the area twice a day for 5-10 minutes, until any tissue tenderness resolves.
- Be sure to drink water — ideally 8 or more glasses each day.
- Any exercise, even light cardio or low-impact workouts, helps the damaged fat cells move through the lymphatic system.

Maintaining your weight and healthy eating will allow you to fully appreciate the benefits of your treatment.

You may experience mild redness, tenderness, swelling or tissue firmness in the treatment area. Tenderness may last two weeks or longer.
